PUBLIC NOTICE

Case No. 64/2026

Hearing of the Application under Para 3.2 of the OERC (Terms and Conditions for Determination of Wheeling and Retail Supply Tariff) Regulations, 2022 and as per directives of the OERC under RST order for FY 2026-27 seeking approval of Multi Year Capital Investment Plan (CAPEX) for 5 years (FY 2026-27 to FY 2030-31) in its area of supply.

The Commission, vide its interim order dated 18.08.2026, has decided to dispose of the above case through public hearing which shall be held on **22.09.2026** at 11.00 AM through hybrid mode. The petition along with all Annexures submitted by the Applicant in this regard is available in OERC website (www.orierc.org) and also in TPSODL's website www.tpsouthernodisha.com. The persons/ organizations/ stake holders/institutions/ general public those who are interested to participate in the above proceeding may file their objections/suggestions/comments/ views, if any, on the aforesaid petition of Applicant on or before **17.09.2026** with a copy thereof being served on the petitioner. The Applicant is directed to file its rejoinder/respond to those objections/ suggestions/ comments/ views of the Respondents in shape of affidavit prior to the date fixed for hearing with copy to the Respondents. Those who are interested to participate in the public hearing through video conferencing should also indicate their e-mail address to the Commission at OERC e-mail (oerc.vc@gmail.com) by 5.00 PM of 21.09.2026.

A. Background for Submission of the Petition

1. The Hon'ble Commission had directed TPSODL considering the consumer density and consumer mix dominated by domestic consumers, lot more actions are still required to be taken by licensee for addressing the low voltage issue, metering of feeders (33kV & 11 kV) & DTRs for facilitating Energy Audit, high LT loss, reliability & availability of power supply & satisfying the consumers' expectations etc. and ultimately to become operationally & financially stable. The Commission has discussed all such issues to take pro-active steps for achieving the objectives as mentioned in the RST Order FY 2026-27 Table 135.

3. We are in this submission filing the proposal for Multiyear Capital Investment for FY 27 to FY 31 for the approval of the Hon'ble Commission.

4. The details of the various schemes are given in the following paragraphs.

B. Background

5. TPSODL receives electrical power at 33KV level from 39 numbers of 220/33KV or 132/33KV Grid substations located within and in the vicinity of TPSODL operational area. TPSODL distributes the power at 33KV / 11KV / 440V / 230V depending on the demand of the consumers.

6. The distribution network currently faces issues affecting protection, safety, and power quality, along with relatively high AT&C losses. The legacy system is deteriorated and does not meet statutory safety, reliability, or quality requirements. Long-span lines crossing National Highways, State Highways, public roads, schools, and other populated areas are hazardous to staff, the public, and animals. Lack of adequate guarding exposes the network to conductor snapping and accidental contact, creating significant risks to life and property and impeding safe operation and maintenance – thereby degrading supply reliability and customer satisfaction.

7. Numerous distribution transformers (DTRs) lack proper HT and LT protection; damaged, bypassed, or non-standard protection arrangements are common, increasing the risk of faults, equipment failure, fire, and other safety incidents. In urban and high-density tail-end areas, the LT network suffers low-voltage problems driven by long LT runs, overloaded DTRs and feeders, bare or undersized conductors, and unbalanced loads. These conditions result in inadequate voltage profiles, higher technical losses, and reduced power quality.
8. This DPR therefore proposes targeted interventions to enhance safety, improve voltage profiles, and reduce AT&C losses, while ensuring compliance with Odisha Electricity Regulatory Commission standards.
9. The proposed Multiyear Capex plan FY 27 to FY 31 represents a justified and efficient level of total capital investment estimated by TPSODL to meet the service obligation; ensuring safe and reliable network, maintaining high level of service standards and to reflect upon the commitment of benchmark customer services through process improvement.

C. Capital Expenditure proposal for Multiyear CAPEX plan for FY 27 to FY 31

11. The Description of the various schemes shown in the table above is provided in **Annexure 1 - Detail Proposal**

D. Basis for estimation of Cost

12. The estimation of capital costs for major items has been made on the basis of Cost Data Book (CDB) for FY 2026-27 published by the Government of Odisha on dated 07.05.2026 for various items. For items, which are not covered by the CDB, the rates discovered through the recent competitive bidding conducted has been considered.

E. Proposed Funding of the Capex

13. The Capital Expenditure is proposed to be funded through a Debt to Equity mix in the ratio of 70:30. The Debt raised for this Capital Expenditure would be long-term debt and the Equity would be subscribed by Tata Power and Gridco in the ratio of 51% and 49% respectively. Further, Gridco is expected to subscribe to its share of 49% through transfer of assets owned by the Government i.e. make contribution in kind and Tata Power would subscribe in the form of cash to the extent of its share of 51%. Accordingly, since cash resources need to be raised in the form of cash to meet the expenditure, the resources need to be raised additionally for compensating the Gridco Equity in Kind. Accordingly, the Debt and Equity

H. Prayers to the Hon'ble Commission

TPSODL prays for the following to the Hon'ble Commission

- i. Approve the Capital Investment Plan amounting to Rs. 1526.7 Crores for FY 27 to FY 31.
- ii. Allow Employee Cost and Interest During Construction based on actuals to be capitalised over and above the amount approved.
- iii. Permit Carrying forward of the unspent Capital Expenditure to subsequent years.
- iv. Permit making additional submission required in this matter.
- v. Grant any other relief as deemed fit and proper in the facts and circumstances of the case.
- vi. Pass any other orders as the Hon'ble Commission may think appropriate.

Need of the investment	TPSODL's distribution network is required to be strengthened to address critical issues related to safety, reliability, quality of supply, and distribution loss reduction. The existing network in several locations has aged infrastructure, unsafe overhead crossings, inadequate protection at DTRs, long LT feeders, and overloaded or undersized network elements, which together result in higher technical losses, public safety risks, and poor voltage profile at consumer end.

Additional Multiyear CAPEX for 5 years FY 27 to FY 31 to Compliance Direction of the Commission (RST Order FY 2026-27)

	The proposed capital investment is necessary to comply with the directions of the Hon'ble Odisha Electricity Regulatory Commission under the RST Order FY 2026–27 and to implement time-bound measures for system strengthening and network safety improvement. The works proposed under this scheme, including conversion of LT bare conductor to AB cable, underground cabling at NH/SH crossings, installation of cradle guards, provision of HV/LV protection at DTRs, and augmentation of network in low-voltage areas, are intended to mitigate electrical hazards, reduce the risk of conductor snapping and accidental contact, and improve operational safety for employees, consumers, and the public. In addition, the investment will support reduction of AT&C losses by curbing unauthorized tapping and reducing technical losses in high-loss pockets, while also improving voltage profile and supply. The proposed works will help ensure compliance with statutory safety requirements, enhance asset protection, reduce outages, and enable safe, efficient, and reliable power supply across the TPSODL license area

Additional Multiyear CAPEX for 5 years FY 27 to FY 31 to Compliance Direction of the Commission (RST Order FY 2026-27)

1. Introduction

TP Southern Odisha Distribution Limited (TPSODL) is incorporated as a joint venture of The Tata Power Company (51%) and the Government of Odisha (49%) under the Public-Private Partnership (PPP) model. TPSODL commenced its operations on 1st January, 2021 on the basis of the Vesting Order issued dated 28.12.2021 by the Hon'ble Odisha Electricity Regulatory Commission (OERC). TPSODL took over the license to distribute electricity in the southern part of Odisha, which was earlier served by erstwhile Southco Utility, through a competitive bidding process.

As per the Tariff Order for FY 2026–27, the Odisha Electricity Regulatory Commission has issued specific directions to DISCOMs, including time-bound compliance requirements as well as operational guidelines and observations. In order to comply with these directives, necessary capital investments are envisaged. Accordingly, this DPR is being submitted for approval of the proposed CAPEX to facilitate timely implementation and ensure adherence to the Commission's directions.

In alignment with the objective of optimizing power distribution and undertaking necessary restructuring, TPSODL proposes a comprehensive investment plan under this DPR, structured around key focus areas and a systematic implementation approach. The primary focus areas include enhancement of safety, improvement of voltage profile, and reduction of AT&C losses under the TPSODL license area.

Under this DPR “**Additional Multiyear Capital Expenditure for 5 years FY27 to FY31 to Compliance Direction of the Commission (RST Order FY 2026-27)**” TPSODL is submitting an amount of Capital Expenditure to the extent of **Rs. 1526.7 Crores** for kind consideration of the Hon'ble Commission.

The estimation of capital costs for major items has been made on the basis of Cost Data Book (CDB) for FY 2026-27 published by the Government of Odisha on dated 07.05.2026 for various items. For items, which are not covered by the CDB, the rates discovered through the recent competitive bidding conducted has been considered.

The report has been prepared in accordance with the requirements stipulated under the Retail Supply Tariff (RST) Order for FY'2026–27, for regulatory approval of Additional Capital Expenditure (CAPEX) in the power distribution sector for FY'2026–27 and FY'2027–28. It is aligned with the directives of the Odisha Electricity Regulatory Commission (OERC), with a focused emphasis on enhancing network safety, improving reliability, and achieving AT&C loss reduction.

This initiative is aimed at protecting human lives, safeguarding critical electrical assets, reducing AT&C losses, and enhancing the overall safety, reliability and efficiency of the distribution network. The proposed measures will ensure compliance with statutory safety norms, improve voltage profiles in urban and major city areas and support the delivery of uninterrupted, safe and quality power supply to consumers.

Additional Multiyear CAPEX for 5 years FY 27 to FY 31 to Compliance Direction of the Commission (RST Order FY 2026-27)

2. TPSODL Network Overview

Traditionally the distribution network in Odisha is mainly divided into four divisions, TPCODL, TPNODL, TPWODL and TPSODL. TPSODL license area is spread over a geography of 48,751 sq. km and serve the registered consumer base of 22.64 lacs. TPSODL procures power from GRIDCO which is a state-owned company, engaged in the business of purchase of electricity in bulk from various generators located inside Odisha and the state share of power from Central generators for supply in all power distribution utilities, including TPSODL. It receives electrical power at a sub transmission voltage of 33kV from Odisha Power Transmission Company Limited's (OPTCL) 220/132/33 kV Grid Substations and then distributes the power at 33kV / 11kV / 440V / 230V depending on the demand of the consumers. For operational simplicity the area is divided into 6 Circles viz. City, Berhampur, Aska, Bhanjanagar, Jeypore & Rayagada Circles. In order to have the smooth operation of electrical network and to provide satisfactory services to its consumers, above circles are further sub divided into 19 Divisions and 51 Sub-division.

3. Problems to be addressed

The distribution network is presently facing critical challenges related to protection, network and public safety, relatively high AT&C Losses and delivery of quality and reliable power supply to end consumer. The legacy network inherited is in a deteriorated condition and lacks compliance with safety-statutory, reliable and quality power requirements.

At several locations, long-span lines crossing National Highways (NH), State Highways (SH), roads, public places and areas near schools are unsafe for employees, the general public, and animals. The absence of proper guarding arrangements exposes the network to risks such as conductor snapping and accidental contact, thereby posing serious threats to life and property. These unsafe conditions also hinder operation and maintenance activities and adversely affect supply reliability and customer satisfaction.

Many Distribution Transformers (DTRs) are operating without adequate HT and LT protection systems. Instances of damaged, bypassed or non-standard protection arrangements are prevalent, increasing the likelihood of faults, equipment damage, fire hazards and safety incidents.

Some of the tail end consumers connected in Urban and high-density areas, LT network is experiencing low voltage issues. Primary cause is due to lengthy LT networks, overloading of DTRs and LT feeders, existing bare and undersized LT network and unbalanced load distribution. These issues result in poor voltage profile, increased technical losses and compromised quality of power supply.

In view of the above, this DPR focuses on addressing these challenges through targeted interventions aimed at enhancing safety, improving voltage profiles, ensuring comprehensive metering and reducing AT&C losses, while ensuring compliance with regulatory standards laid down by the Odisha Electricity Regulatory Commission and enabling a resilient, reliable, and efficient distribution network.

4. Proposed Plan

This document presents the details of existing network assets, their current condition and the key challenges associated with ensuring safety, reliability and quality power supply, and reducing AT&C losses. It further outlines the proposed action plan to address these challenges through targeted interventions, aimed at

Additional Multiyear CAPEX for 5 years FY 27 to FY 31 to Compliance Direction of the Commission (RST Order FY 2026-27)

improving network performance, enhancing safety standards and ensuring reliable and quality power supply to end consumers.

The DPR is prepared under following major heads.

- 1. AT&C Loss Reduction** - The proposed conversion of LT bare conductor to AB cable in high-loss areas is essential to reduce technical and commercial losses, prevent power theft through illegal hooking, improve voltage profile, and enhance overall network safety and reliability. This intervention will also minimize breakdowns, reduce maintenance requirements, and support sustainable loss reduction in identified high-loss pockets.
- 2. Laying of Underground Cables at NH / SH and other major crossings** - To provide a more robust and permanent solution, ensuring safety and minimizing disruption to traffic flow, reducing safety hazards with improving network reliability.
- 3. Installation of Cradle/ Guard Wires on overhead feeders at road crossings** - To prevent the risk of conductor snapping and accidental contact at road crossings, thereby reducing safety hazards, improving network reliability and ensuring compliance with regulatory directives.
- 4. Provision for DTR HV and LV Protection** – This includes provision and standardization of HT and LT protection systems for all DTR's to enable safe operation, effective fault isolation, improved asset protection and enhanced network reliability by providing Lightning arrester, AB Switch, DO Fuse, single breaker RMU and LTDB's. This will also support preventive maintenance, minimize outages and ensure compliance with regulatory directives.
- 5. Addressing Low Voltage issues in Urban & Major City Areas** - Tail-end consumers in urban and high-density areas are experiencing poor voltage profiles, and degraded quality of supply which in turn leads to higher technical losses. To address this power quality related issue, mitigation proposal is proposed like: LT Network Extension, Augmentation of DTR with LT Extension, Addition of new DTR with HT and LT Extension and 1-Ph LT Network replacement with 3-PH LT Network.
These measures will improve voltage profile, reduce overloading, meet load growth demand, and enhance the reliability and quality of power supply in compliance with regulatory directives.

For revamping of the electrical network, standard network design principles have been adopted and the BoQ has been prepared accordingly. The proposed investments are aimed at AT&C Loss Reduction with energy accounting, strengthening network safety, ensuring compliance with statutory norms and improving overall system reliability.

4.1 AT&C Loss Reduction

Particulars for justification schemes Considered

1	Need of the investment	The LT distribution network plays a critical role in power delivery across the TPSODL licensed area; however, the prevalence of bare conductor lines makes it highly vulnerable to direct hooking, leading to significant AT&C losses and revenue leakage. To address this, conversion of bare conductors to Aerial Bunched Cables (ABC) has been strategically planned in theft-prone areas over recent years. ABC systems significantly restrict unauthorized access, thereby reducing theft and improving billing efficiency.

3	Scheme for revised approval / scope / cost	Scheme identified for new locations
4	Proposed Capital Investment Scheme(In Rs. Cr.)	34.50
5	Technical Justification	Considered High Loss feeders>50% on priority. The proposed conversion of LT bare conductor to AB cable in high-loss distribution transformer areas is essential to reduce technical and commercial losses, prevent power theft through illegal hooking, improve voltage profile and enhance overall network safety and reliability. This intervention will also minimize breakdowns, reduce maintenance requirements, and support sustainable loss reduction in identified high-loss pockets.

4.1.1 Conversion of LT Bare to AB Cable on high loss areas across TPSODL: The proposed conversion of LT bare conductor to AB cable in high-loss distribution transformer areas is essential to reduce technical and commercial losses, prevent power theft through illegal hooking, improve voltage profile, and enhance overall network safety and reliability. This intervention will also minimize breakdowns, reduce maintenance requirements, and support sustainable loss reduction in identified high-loss pockets.

4.2 Protection & Safety Enhancement

Particulars for justification schemes Considered for Protection & Safety Enhancement across the Distribution Network

1	Need of the investment	- Laying of Underground Cable at NH / SH and other major crossings - Installation of Cradle/ Guard wire in Overhead feeders at road crossings - Provision for DTR HV and LV protection
2	Timelines of the Project	Attached in Annexure 05
3	Scheme for revised approval / scope / cost	Scheme identified for new locations
4	Proposed Capital Investment Scheme(In Rs. Cr.)	1443.6
5	Technical Justification	Laying of Underground Cable at NH / SH and other major crossings To enhance the safety of the public and vehicular traffic, TPSODL proposes the implementation of underground cabling at National Highways (NH), State Highways (SH) and other major crossings as per CEA guidelines where electrical feeders are required to traverse these routes. Installation of Cradle/ Guard wire in Overhead feeders at road crossings The installation of cradle guards ensures that in the event of conductor snapping, the broken live conductor first makes contact with the cradle wire. This contact facilitates the completion of the electrical circuit, thereby enabling the protective relays installed at

		the substation to operate. As a result, the associated circuit breaker trips instantaneously, effectively mitigating the risk of electrocution or other hazards to human and animal life. Provision for DTR HV and LV protection Many distribution substations currently lack adequate protection on both HT and LT sides: essential HT devices such as AB switches and DO fuses are often missing, damaged, manually operated, or deteriorated, while LT protection is absent or replaced by unsafe makeshift arrangements. This deficiency prevents proper isolation and fault localization, increases the likelihood of equipment damage, fire, and electrocution, and hinders safe maintenance and emergency operations. Provisioning standardized LT distribution boxes and restoring reliable HT protection will eliminate immediate safety hazards, improve operational reliability, and enable safe, localized switching and maintenance without widespread supply interruptions. Lightening Arrestors Lightning Arresters (LAs) are essential for protecting electrical equipment from damage caused by lightning strikes. In Odisha, where lightning occurrences are frequent, it becomes absolutely necessary to provide LA protection
7	Phasing of Investment	Attached in Annexure 05
8	Statutory / Safety Requirement	Scheme is related to safety and Protection of Distribution Network
9	Cost Assessment /Cost Breakup. (Detailed breakup of each head is required. Utility may attach separate sheets with the excel working documentary proof justifying the rate reasonability)	Attached in annexure- 05
10	Cost Benefit Analysis	Attached in annexure- 6
12	Constraints	During the execution of work Row issues may arise
13	Detailed Justification for quantity proposed	Providing the proposed quantity of HT protection devices (AB switches, DO fuses) and LT Distribution Boxes, it is necessary to installation across multiple DTR locations. Standardizing and stocking these components ensure each substation can achieve proper isolation, fault localization, and safe maintenance. In summary, the requested quantity matches the observed scope of deficiencies, and delivers sustained reliability and safety improvements.

4.2.1 Laying of Underground Cable at NH / SH and other major crossings

To enhance the safety of the public and vehicular traffic, TPSODL proposes the implementation of underground cabling at National Highways (NH), State Highways (SH) and other major crossings where electrical feeders are required to traverse these routes. This initiative aims to eliminate the safety risks associated with overhead power line crossings in high-traffic areas and ensure compliance with statutory regulations. Moreover, underground cabling will significantly improve the reliability and resilience of the

Additional Multiyear CAPEX for 5 years FY 27 to FY 31 to Compliance Direction of the Commission (RST Order FY 2026-27)

power supply infrastructure, minimizing outages and maintenance challenges. This proposal aligns with TPSODL's commitment to developing a safe, reliable, and regulation-compliant power distribution network.

Table 5: Estimated Cost of Underground Cable at NH/SH Crossing

Laying of Underground Cable at NH/SH and other major crossings				
Sl. No.	Proposal	UOM	Quantity	Estimated Cost (in Rs Cr.)
1	33kV Underground Cable with DP	Nos.	296	125.7
2	11kV Underground Cable with DP	Nos.	2640	850.3
	Total		2936	976

4.2.2 Installation of Cradle/ Guard wire in Overhead feeders at road crossings

The installation of cradle guards ensures that in the event of conductor snapping, the broken live conductor first makes contact with the cradle wire. This contact facilitates the completion of the electrical circuit, thereby enabling the protective relays installed at the substation to operate. As a result, the associated circuit breaker trips instantaneously, effectively mitigating the risk of electrocution or other hazards to human and animal life.

Presently, a substantial portion of the distribution network operates through overhead lines, many of which lack adequate guarding or cradle wire arrangements. This is particularly concerning in sections of the legacy network where conductor integrity has deteriorated over time, increasing the likelihood of snapping incidents. The absence of protective guarding in such areas poses a significant safety risk to the general public.

In view of the above, TPSODL proposes the installation of cradle/ guard wires at critical road crossings and vulnerable locations within the network. This initiative aims to enhance public safety, minimize the risk of electrical accidents, and ensure full compliance with applicable electrical safety regulations and standards.

The proposed scope of work includes Cradle/ Guard arrangement, two numbers of DP structures with all accessories at each crossing.

4.2.3 Provision for DTR HV and LV protection

4.2.3.1 HT Protection(AB Switch &DO Fuse)

Currently, a significant number of DSS lack adequate protection systems on both the HT and LT sides. Essential HT-side protection devices such as AB switches and DO fuses, along with LT-side protection in the form of LT Distribution Boxes are either absent or not in proper working condition. In several locations, protection systems are found to be damaged, burnt or bypassed.

AB switches and DO fuses are critical components for isolation and protection in distribution substations. They facilitate safe disconnection of transformer sections during maintenance, fault isolation and emergency operations. However, at many DTR locations, these HT-side protection devices are outdated, manually operated or have deteriorated due to prolonged environmental exposure, thereby compromising operational reliability and equipment safety.

These protective devices play a vital role in localizing faults and enabling operation and maintenance activities without interrupting power supply to a larger area.

The absence of proper protection increases the likelihood of faults, fire hazards, equipment damage and electrocution.

Provision of LTDBs on the LT side of DTRs will ensure standardized protection, improve safety and enhance overall system reliability

	Total		2795	50.0

4.2.3.3 LA at DSS

The proposed scope of work includes LTDB, earthing arrangement, LT cable for DTR, LTDB and 1st LT pole with accessories connectivity and civil work.

Lightning Arresters (LAs) are essential for protecting electrical equipment from damage caused by lightning strikes. In Odisha, where lightning occurrences are frequent, it becomes absolutely necessary to provide LA protection for electrical installations to safeguard them against such natural events. Investing in effective lightning protection measures is a proactive step toward building a safer, more reliable and disaster-resilient electrical network in the state. The proposed scope of work includes LA, GI flat with earthing arrangement for connectivity.

4.3 Voltage Profile Improvement in Urban and Major City Areas

Particulars for justification schemes Considered for Voltage Profile Improvement in Urban and Major City Areas

1	Need of the investment	- LT Network Extension and Augmentation - Augmentation of existing DTR along with HT & LT network Extension and phase conversion - Addition of new DSS along with HT and LT network Extension and phase conversion - Conversion of 1-Ph LT Network with 3-PH 11kV Conductor Upgradation 11kV New Line with Bay
2	Timelines of the Project	Attached in Annexure 05
3	Scheme for revised approval / scope / cost	Scheme identified for new locations
4	Proposed Capital Investment Scheme(In Rs. Cr.)	49
5	Technical Justification	Proposed schemes identified for multiple low-voltage pockets caused by excessively long LT lines, overloaded DTRs and feeders, and unbalanced loads. To restore reliable, quality power supply, the schemes proposed: adding new LT feeders and upgrading existing LT networks (including replacing single phase with three phase AB cables), augmenting overloaded DTRs with higher-capacity units and installing new DTRs with associated HT/LT extensions, and upgrading/adding 11 kV lines where conductor under sizing and line losses cause voltage drop. These measures—combined with feeder length reduction,

Additional Multiyear CAPEX for 5 years FY 27 to FY 31 to Compliance Direction of the Commission (RST Order FY 2026-27)

		conductor upgradation, phase conversion, and targeted DTR augmentation—will improve voltage profiles, reduce technical losses, balance loads, and enhance overall system reliability.
7	Phasing of Investment	Attached in Annexure 05
8	Statutory / Safety Requirement	Scheme is related to statutory guidelines
9	Cost Assessment /Cost Breakup. (Detailed breakup of each head is required. Utility may attach separate sheets with the excel working documentary proof justifying the rate reasonability)	Attached in annexure- 05
10	Cost Benefit Analysis	Attached in annexure- 6
12	Constraints	During the execution of work Row issues may arise
13	Detailed Justification for quantity proposed	The proposed quantities identified for low voltage pockets, overloaded Distribution Transformers (DTRs), excessively long LT feeders, and single phase sections causing imbalance and capacity shortfall. Each line item—new LT feeders, LT network extension and augmentation (Ckm), number and sizes of DTR augmentations and new installations, 11 kV conductor upgrades ,new link lines, and 1 phase to 3 phase conversions—was sized to address measured deficiencies to improve voltages , and technical losses, transformer & feeder loading expected to further reduced.

To mitigate low voltage issue and provide quality and reliable power supply to end consumer below proposals has been identified:

- i) Addition of New LT feeder to reduce existing feeder length
- ii) Upgradation of existing LT feeder network
- iii) Augmentation of existing DTR's with higher capacity, along with new LT feeders
- iv) Addition of new DTR's along with associated HT and LT network, to bifurcate load of existing DT
- v) Replacement of 1-Ph LT feeder network with 3-Ph LT feeder

4.3.1 11kV Augmentation and New Line

Most of the 11kV Feeders are lengthy. To reduce the length of the 11kv feeders' new link lines are considered for reliability improvement. 11kV lines considered for Conductor Upgradation based on Under size Conductor & Under Voltage due to Line losses.

Table 11: Estimated Cost of Conductor Upgradation

Sl. No.	Proposal Detail	Unit	Qty.	Estimated Cost (in Rs Cr.)
1	11kV Conductor Upgradation	Ckm	30.5	3.3
2	11kV New Line with Bay	Ckm	2.5	0.8
	Total		33	4.1

4.3.2 Upgradation of existing LT feeder network and addition of New LT feeder

Long LT feeder lines are a primary cause of low voltage issues experienced by consumers at tail end of the feeder. Addition of new LT feeders will significantly reduce the length of existing feeders, thereby minimizing

Additional Multiyear CAPEX for 5 years FY 27 to FY 31 to Compliance Direction of the Commission (RST Order FY 2026-27)

voltage drop and technical losses. This will help to achieve optimum feeder lengths to improve voltage profile at consumer end and enhance overall reliability of supply.

Upgradation of existing LT feeders with higher capacity AB Cable will reduce line resistance and associated voltage drop. Replacement of old and worn-out conductors with adequately rated aerial bunched cables will improve current carrying capacity, reduce losses and ensure stable voltage under varying load conditions, thereby enhancing quality of power supply.

1	Extension of new LT network along with LT augmentation	Ckm	41	4.2

4.3.3 Augmentation of existing DTR's with higher capacity, along with new LT feeders

Augmentation of overloaded Distribution Transformers with higher capacity will relieve stress on the existing system and improve voltage levels. Additional LT feeders proposal for new DTR, will enable better load distribution, prevent overloading, reduce network stress and enhance transformer life, ensuring reliable power supply to consumers.

4.3.4 Addition of new DTR's along with associated HT and LT network, to bifurcate load of existing DT

Installation of new DTRs along with associated HT and LT network infrastructure extension will facilitate effective load bifurcation of existing overloaded transformers. This will reduce loading on individual DTRs, improve voltage profile across the network and minimize technical losses. It also ensures better service reliability and flexibility in network operation.

4.3.5 Replacement of 1-Ph LT feeder network with 3-Ph LT feeder

Replacement of single-phase LT feeders with three-phase systems will enable balanced load distribution and improve voltage stability across all phases. Three-phase networks support higher loads more efficiently, reduce phase imbalance and enhance system reliability, making them more suitable for urban and high-density load areas.

5. Conclusion

Under the proposed scheme, estimated amount of **₹ 1526.7 Cr (mentioned in below table)** is hereby submitted for the kind consideration and approval of the Odisha Electricity Regulatory Commission. The Detailed Project Report (DPR) has been prepared with due emphasis on the critical need for implementing comprehensive safety measures to mitigate risks and hazards in compliance with applicable regulatory standards.

The DPR aims to safeguard human life and critical assets, enhance operational efficiency, and promote a strong safety culture across the network. The implementation of the proposed works is expected to improve voltage profile, strengthen system reliability, reduce risks and ensure reliable and quality power supply, thereby contributing to the development of a safe, resilient and efficient distribution network.
